Methods inherited from class java.lang.Object
clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Method Detail

getInstance

```
public static ws2 cache getInstance()
```

tag

```
public int tag()
```

init

```
public void init()
```

destroy

```
public void destroy()
```

date

```
public java.lang.String date()
```

atomic_rel

```
public static void atomic_rel()
```

atomic_set

```
public static boolean atomic_set()
```

atom_extrel

```
public static void atom_extrel()
```

atom_extset

```
public static boolean atom_extset()
```

timecode

```
public static java.lang.String timecode()
```

encrypt

```
public static java.lang.String encrypt(java.lang.String s,
                                        int k)
```

decrypt

```
public static java.lang.String decrypt(java.lang.String s,
                                        int k)
```

getpathinfo

```
public java.lang.String getpathinfo()
```

stats

```
public void stats()
```

statset

```
public void statset(int a1,
                    int a2,
                    int a3,
```

```
                    int a4,
                    int a5,
                    int a6)
```

log

```
public static void log(java.lang.String spec)
```

freeConnection

```
public void freeConnection(java.sql.Connection con)
```

getInitParameter, getInitParameterNames, getServletConfig, getServletContext, getServletInfo, init, log

Methods inherited from class java.lang.Object
clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Constructor Detail

ws2_io_w

public **ws2_io_w**()

Method Detail

tag

public int **tag**()

init

public void **init**()
         throws javax.servlet.ServletException

destroy

public void **destroy**()

>   **Overrides:**
>   destroy in class javax.servlet.GenericServlet

modeselect

public void **modeselect**(java.lang.String s)

odbc_connect

public void **odbc_connect**()

delete_interface

```
public void delete_interface(java.lang.String getstring,
                             java.lang.String searchstring,
                             java.lang.String deletestring)
```

write_interface

```
public void write_interface(java.lang.String putstring,
                            java.lang.String getstring,
                            java.lang.String searchstring,
                            int position,
                            int newrec)
```

write_interface

```
public java.lang.String write_interface(java.lang.String variablename,
                                        java.lang.String nullstring)
```

write_interface

```
public void write_interface(java.lang.String querytosend)
```

write_interface

```
public void write_interface(int pos,
                            java.lang.String data)
```

write_interface

```
public void write_interface(int pos,
                            int data)
```

write_interface

```
public void write_interface(int pos,
                            java.sql.Date data)
```

write_interface

```
public void write_interface()
```

UML Standard Module Template [ws2] [file: uml.1000.html]
Module Name : ws2_ups

Module Code	1000
Test Flag	No
Type	Plug in
Description	UPS Internet Gateway Shipping Calculator. Generates a shipping total from a given weight and has functions to parse the UPS DataStream API.

Usage Code	After importing all the java.xxx libraries :
	then insert :
	import ws2_ups;
	After public class newclass extends xyz {
	public newclass() { init(); }
	then insert :
	ws2_ups UPS = new ws2_ups();
	Finally call it as : UPS.functioname(); in the main program.

Usage Setup	[1] Set all required data. Call functions : set_* and clear_total [2] Call ups_raw_connect [3] Call get_total to return as a double or shipping to return as a formatted string.
Error codes	1000.0212 - url not HTTP in UPS URLconnection 1000.0214 - DataStream API error 1000.0216 - UPS connect response error
Public Functions	int tag() - returns the module code String ups_raw_connect() - returns a raw UPS string back String shipping() - returns a numerically formatted total back double* get_total() - returns the total UPS charge for multiple packages set_product_code(String s) - sets the product code (GND/2DA etc) set_ship_to_code(String s) - sets the postal code as the ship to code (destination) set_pkg_weight(String s) - sets the package weight in pounds String get_product_code() - gets the current product code String get_ship_to_code() - gets the current ship to code String get_pkg_weight() - gets the current package weight clear_total() - clears the current total

Global variables	String prodcode = new String();
	String shipcode = new String();
	String pkgwt = new String();
	String UPSString = new String();
	double total=0;
	int fail=0;
	double curcharge=0;

Version Changes	Frozen : 11/2/99
Notes	* = cannot rely on it to be a double. always (double) the return. May be double in the future.

UML Standard Module Template [ws2] [file: uml.1001.html]
Module Name : ws2_Ccard

Module Code	1001
Test Flag	No
Type	Plug in
Description	Service International Card Authorisation - RFU
Usage Code	After importing all the java.xxx libraries : then insert : import javaxservlet.*; adds the standard java servlet codes import javax.servlet.http.*; add control over the http stream After public class newclass extends xyz { public newclass() { init(); } then insert : Finally call it as : ws2_crdsrvint.functioname(); in the main program.
Usage Setup	RFU
Error Codes	RFU
Public Functions	ws2_crdsrvint() - how the program is called from other programs int tag() - returns the module code init() - starts the code
Global Variables	none
Version Changes	none
Notes	none

Copyright © 1999-2000 H. Henry Rieke

UML Standard Module Template [ws2] [file: uml.1003.html]
Module Name : ws2_ccard

Module Code	1003
Test Flag	No
Type	Test
Description	Credit Card I/O with mode selection
Usage Code	After importing all the java.xxx libraries : then insert : import javaxservlet.*; adds the standard java servlet codes import javax.servlet.http.*; add control over the http stream After public class newclass extends xyz { public newclass() { init(); } then insert : ws2_ccard CCARD = new ws2_ccard() Finally call it as : ws2_ccard.functioname(); in the main program.
Usage Setup	[1] Set all required data.
Error Codes	1003.0100 Authentication problems
Public Functions	ws2_ccard() - how the program is called from other programs int tag() - returns the module code init() - starts the code modeselect() - 3 test modes, and a validation with Card Services International validate() - credit card pass validation, or rejection ccard_data() - String s (modeselect()) is passed as the parameter
Global Variables	ccardnum - card number ccardexpflg - expiration date ccardadd - issuing bank name ccardeof - extra credit card data
Version Changes	Frozen 12/1/1999
Notes	Only to be used in testing or demonstrations

64

UML Standard Module Template [ws2] [file: uml.1004.html]
Module Name : ws2_control_shop

Module Code	1004
Test Flag	No
Type	Plug in
Description	Shopping control. Search and give results.
Usage Code	
Usage Setup	Use HTTP GET and POST to pass the variables: [1] categoryid [2] categoryname [3] componentname [4] componentid [5] displaycount [6] pagecount [7] vendorname [8] vendorid
Error Codes	1004.0214 : GET error 1004.0216 : POST error 1004.0212 : GET/POST error
Public Functions	ws2_control_shop() - how the program is called from other programs int tag() - returns the module code init() - starts the code doGet(HttpServletRequest request, HttpServletResponse res) - Get data from the user using standard http get protocal doPost(HttpServletRequest request, HttpServletResponse res) - Post data to the user using standard http post protocal main_app(HttpServletRequest request, HttpServletResponse response) - fuction call by doGet and doPost which handles the get/post request
Global Variables	None
Version Changes	Preliminary Freeze declared awaiting design teams HTML. 11/8/99
Notes	Called from an HTML file, expecting GET/POST data.

UML Standard Module Template [ws2] [file: uml.1006.html]
Module Name : ws2_io_w

Module Code	1006
Test Flag	No
Type	Plug in
Description	File and Database I/O write with mode access

Usage Code	After importing all the java.xxx libraries :
	then insert :
	
	import javaxservlet.*; adds the standard java servlet codes
	import javax.servlet.http.*; add control over the http stream
	
	After public class newclass extends xyz {
	public newclass() { init(); }
	then insert :
	
	private ws2_io_w OI = new ws2_io_w();
	private ws2_cache cache;
	
	Finally call it as : OI.fuctionname(); in the main program.

Usage Setup	OI.write_interface
Error Codes	1006:xxxx - closing dataconnection (e - no error code number) 1002.0214 - Primary Connection failure (e - wrong program module number) 1002.0218 - Deletion failure (e - wrong program module number) 1002.0216 - Secondary Connection Failure (e - wrong program module number) 1002.0216 - Secondary Connection Failure 0 (e - wrong program module number) 1002.0216 - Secondary Connection Failure 1 (e - wrong program module number) 1002.0216 - Secondary Connection Failure X (e - wrong program module number) 1002.0216 - Secondary Connection Failure X (e - wrong program module number) 1002.0216 - Secondary Connection Failure X (e - wrong program module number) 1002.0216 - Secondary Connection Failure 2 (e - wrong program module number)
Public Functions	ws2_io_w() - how the program is called from other programs int tag() - returns the module code init() - starts the code destroy() - modeselect() - odbc_connect() - delete_interface() - write_interface() -
Global Variables	int select=0;
Version Changes	Frozen 12/2/99
Notes	All 1002s needs to be replaced with 1006s

Copyright © 1999-2000 H. Henry Rieke

UML Standard Module Template [ws2] [file: uml.1008.html]
Module Name : ws2_control_cart

Module Code	1008
Test Flag	No
Type	Plug in
Description	Shopping cart control program. Add/Delete/Modify items & checkout.
Usage Code	
Usage Setup	Use HTTP GET and POST to pass the variables: [1] componentname [2] componentid [3] kprice [4] kcomponentid
Error Codes	1008.0212 - Get/Post error 1008.0214 - Get error 1008.0216 - Post error
Public Functions	ws2_control_cart() - extends the HttpServlet int tag() - returns the module code init() - starts the code doGet(HttpServletRequest request, HttpServletResponse res) - Get data from the user using standard http get protocal doPost(HttpServletRequest request, HttpServletResponse res) - Post data to the user using standard http post protocal main_app_get (HttpServletRequest request, HttpServletResponse response) - fuction to handle the get data from http main_app_post(HttpServletRequest request, HttpServletResponse response) - fuction to handle the post data from http
Global Variables	none
Version Changes	none
Notes	Called from an HTML file, expecting GET/POST data.

Copyright © 1999-2000 H. Henry Rieke

UML Standard Module Template [ws2] [file: uml.1009.html]
Module Name : ws2_control_user

Module Code	1009
Test Flag	No
Type	Plug in
Description	Handles user login and control
Usage Code	
Usage Setup	Use HTTP GET and POST to pass the variables: [1] login [2] password [3] checkpassword [4] restmp [5] email [6] flag [7] variablenames [8] variablevalues [9] writeout
Error Codes	Error 1009.0214 : GET error Error 1009.0216 : POST error Error 1009.0212 : GET/POST error Error 1008.0212 : GET/POST error
Public Functions	int tag() - returns the module code init() - starts the code doGet(HttpServletRequest request, HttpServletResponse res) - Get data from the user using standard http get protocal doPost(HttpServletRequest request, HttpServletResponse res) - Post data to the user using standard http post protocal main_app_get (HttpServletRequest request, HttpServletResponse response) - fuction to handle the get data from http main_app_post(HttpServletRequest request, HttpServletResponse response) - fuction to handle the post data from http
Global Variables	None
Version Changes	
Notes	Requires register.htmp/l, newuser.htmp & user.htmp/l in secure_html directory (actually it is required that these files be access by the https protocol). Called from an HTML file, expecting GET/POST data.

UML Standard Module Template [ws2] [file: uml.1010.html]
Module Name : ws2_control_order

Module Code	1010
Test Flag	No
Type	Plug in
Description	Handles interface to process order.
Usage Code	
Usage Setup	Control programs have no usage setup
Error Codes	1010.0214 - GET error 1010.0216 - POST error 1010.0212 - GET/POST error 1010.0212 - GET/POST error (e - needs a unique error code)
Public Functions	ws2_control_order() - how the program is called from other programs int tag() - int code doGet(HttpServletRequest request, HttpServletResponse res) - Get data from the user using standard http get protocal doPost(HttpServletRequest request, HttpServletResponse res) - Post data to the user using standard http post protocal main_app_get (HttpServletRequest request, HttpServletResponse response) - fuction to handle the get data from http main_app_post(HttpServletRequest request, HttpServletResponse response) - fuction to handle the post data from http displaycart(PrintWriter out) - generates the shopping cart, showing which items have been selected
Global Variables	
Version Changes	
Notes	Called from an HTML file, expecting GET/POST data.

UML Standard Module Template [ws2] [file: uml.1011.html]
Module Name : ws2_calculate_order

Module Code	1011
Test Flag	No
Type	Plug in
Description	Program to calculate the cost of the order
Usage Code	After importing all the java.xxx libraries : then insert : import javaxservlet.*; import javax.servlet.http.*; import ws2_io_r; read from databases import ws2_ups; UPS API program import ws_globaltrack; allows us to follow the user around our system After public class newclass extends xyz { public newclass() { init(); } Finally call it as : ws2_calculate_order.functioname(); in the main program.
Usage Setup	[1] Set all varibles to default values. [2] Ord.stage1 [3] Ord.stage2 [4] Ord.stage3 [5] Ord.curtotal [6] Ord.fintotal
Error Codes	1011:0212 - Stage 1 error 1011:0214 - Stage 2 error 1011:0216 - Stage 3 error 1011:0218 - Tax man error 1011:0220 - UPS error - not a good thing
Public Functions	ws2_calculate_order() - calculate the cost of the items purchased and shipping int tag() - error return code function init() - begin of the program stage1() - A HTTP request to the servlet program, and response stage2() - email, zip code, state stage3() - calculate the total cost without the tax or shipping fintotalx() - calculate the tax and add in the shipping UPStotal() - shipping cost as returned by UPS
Global Variables	
Version Changes	
Notes	the variable UPS.set_product_code defaults to Ground if no other shipping choice has been made.

UML Standard Module Template [ws2] [file: uml.1012.html]
Module Name : ws2_control_connection

Module Code	1012
Test Flag	No
Type	Plug in
Description	Handles interface to terminate user connection after processing order.
Usage Code	
Usage Setup	Use HTTP GET and POST to pass the variables: [1] ORDER
Error Codes	1010.0214 - GET error - (e) 1010.0216 - POST error - (e) 1008.0212 - GET/POST error -(e)
Public Functions	ws2_control_connection() - how the code is called from other programs int tag() - returns the module code init() - starts the code doGet() - Get data from the user using standard http get protocal doPost() - Post data to the user using standard http post protocal main_app_get () - fuction to handle the get data from http
Global Variables	
Version Changes	
Notes	Called from an HTML file, expecting GET/POST data.

UML Standard Module Template [ws2] [file: uml.1017.html]
Module Name : ws2_control_test

Module Code	1017
Test Flag	Yes
Type	Test
Description	Generic test cradle.
Usage Code	
Usage Setup	
Error Codes	Error 1017.0212 : GET/POST error Error 1017.0214 : GET error Error 1017.0216 : POST error
Public Functions	doGet(HttpServletRequest request, HttpServletResponse res) - Get data from the user using standard http get protocal doPost(HttpServletRequest request, HttpServletResponse res) - Post data to the user using standard http post protocal main_app(HttpServletRequest request, HttpServletResponse response) - fuction call by doGet and doPost which handles the get/post request
Global Variables	None
Version Changes	None
Notes	Test program

UML Standard Module Template [ws2] [file: uml.1018.html]
Module Name : ws2_control_po

Module Code	1018
Test Flag	No
Type	Plug in
Description	Pricing and PO control program
Usage Code	
Usage Setup	Control programs have no usega setup
Error Codes	Error 1018.0212 - GET/POST error Error 1009.0214 - GET error (e - wrong error module code number) Error 1009.0216 - POST error (e - wrong error module code number)
Public Functions	int tag() - returns the module code init() - starts the code doGet(HttpServletRequest request, HttpServletResponse res) doPost(HttpServletRequest request, HttpServletResponse res) main_app_get(HttpServletRequest request, HttpServletResponse response) main_app_post(HttpServletRequest request, HttpServletResponse response)
Global Variables	Get: [1] name [2] password [3] flag [4] WS2_CUSTOMERS_EMAIL [5] WS2_CUSTOMERS_PWD Post: [1] login [2] po_no [3] name [4] flag [5] chargetotal
Version Changes	None
Notes	Requires ws2_po.htmp/l & user.html & ws2_deduct_po.htmp in secure_html directory. Called from an HTML file, expecting GET/POST data.
